Subject: RE: Reframing Chemical Risk Assessment draft paper
VandenbergAgerstrand etal_SYRINA_2016.docx

Thanks Maureen and Kacee for pulling this further along, and I will look to add comments/revisions by next Monday.

For all of your consideration, attached is a just published framework for systematic review and integrated assessment that covers a number of general principles and applications that may be useful to our paper.

Till the 25th, David

Subject: Reframing Chemical Risk Assessment draft paper

Hi all –

Kacee and I have been working on pulling together the pieces received from all of you for the “Reframing Risk” paper and building on our group discussions. The attached is still a working draft, with some areas needing more input than others. Currently the discussion needs to be further fleshed out. I propose to the group to **please send comments and revisions on the existing text by July 18th**. I will incorporate those and send back around for **discussion at a meeting the week of July 25th**, at which we can propose recommendations to be included in the paper conclusions.

Kacee and I also have a MPH student intern working with us this summer who will be able to help with the tables, figures, and references in the attached. Laura Romano is a student at GWU who will be doing her practicum with us over the remainder of the summer.

A few points:

- The figure to represent a framework for public health based risk assessment needs to be heavily revised. I will work on that while the group reviews the draft attached, and share when I have some updated options.
- We have proposed some tables to cut down on text while touching on the large number of topics. These are not fully fleshed out in the current draft.
- In revising, we moved text and topics around somewhat from the original sections. I'm attaching the last draft outline so you can see any changes as you review.
- At our last meeting, we talked about including a figure on acceptable risk. That is not included in this draft at this time.
- Discussion and recommendations will need to be strengthened.
- Conclusions to be written following the next discussion.

Thanks

Maureen
